

Summer Efficiency Tip:

Did you know **HUMIDITY**
can **REDUCE**
EFFICIENCY and
INCREASE
air conditioner energy
CONSUMPTION
by up to 35%?

When Willis Carrier invented the first air conditioner in 1902, the purpose was removing humidity in a New York printing company.

Ways to lower humidity in your home, reducing the work your air conditioner has to do, include:

- Bathroom exhaust fans should be vented to outside
- Install moisture barrier on 100% of floor in enclosed crawlspace
- Dryer exhaust should be vented to outside
- Install downspout extensions on gutter system to defer water away from foundation
- Have HVAC serviced at least once a year to ensure maximum efficiency

Reminder: We REALLY want to hear from you!

The 2018 Customer Survey ends June 30th. If you have not completed the survey in your May bill, scan the QR code or visit www.hsvutil.org/customersurvey and take it online. We will also conduct a random-customer phone survey during June. Thank you!
